**DETAILED ACTION**

1. This office action is in response to the Application 10/063,394 filed 04/18/2002.

2. Claims 1-24 are pending in the Application.

***Election/Restrictions***

3. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-10 and 19-24, drawn to a method and apparatus of coordinating timing signals within integrated circuits, classified in class 716, subclass 6.
- II. Claims 11-18, drawn to a receiver circuit having a plurality of channels, classified in class 375, subclass 354.

4. The inventions are distinct, each from the other because of the following reasons:

Inventions Group I and Group II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination has separate utility such as coordinating timing signals within integrated circuits. The subcombination has separate utility such as a receiver.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
